

CELLULAR BACKUP

HOW DOES IT WORK?

Cellular Backup is installed inline with your existing payment firewall to provide seamless credit card processing when your internet connection goes down. It can be connected to your entire site or to your payment firewall only. Connecting it to the entire site provides internet for back office PC, ATM, and other devices when your primary internet connection goes down.

The Cellular Backup simply acts as a replacement device for your internet connection when your primary internet goes down. All data feeding the cell modem has already been encrypted. This can be used in applications where conventional high speed internet is not available.

INSTALLATION

The device is plug and play, but it is recommended that a technician install it if you do not feel comfortable installing an internet router.

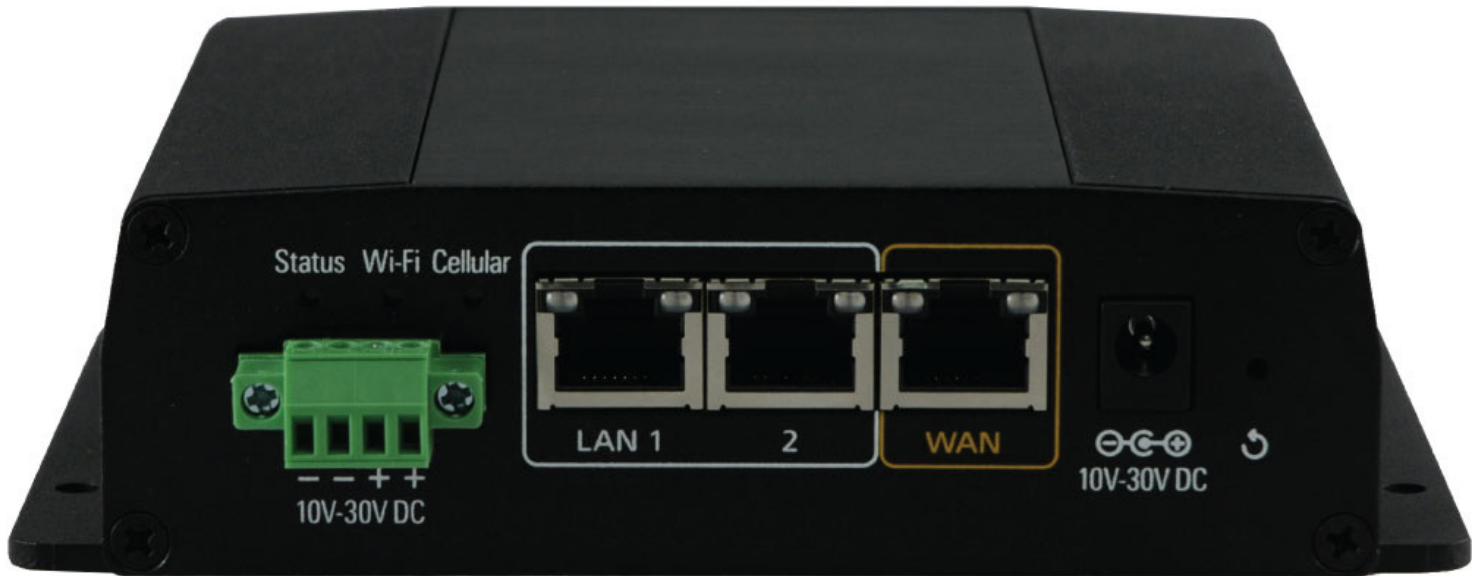

This device is POS agnostic. It will work with any POS device that uses the internet for credit card processing.

You will receive an email alert letting you know the internet is down and you are on back-up. You will also receive an alert when the internet is restored.

We provide industrial grade, reliable devices at an affordable cost. There is a monthly fee of \$15 for the device and \$20 per GB of data used. Data can be pooled between all devices on your account and is charged in 1 GB blocks.

CELLULAR BACKUP IS INSTALLED INLINE WITH YOUR EXISTING PAYMENT FIREWALL TO PROVIDE SEAMLESS CREDIT CARD PROCESSING WHEN YOUR INTERNET CONNECTION GOES DOWN.

OPTIONS:

Payment only

- Advantages: Manage cost, you know when internet is down
- Disadvantages: Only credit cards, no back office internet access

Entire Site

- Advantages: Entire site has seamless internet backup
- Disadvantages: May not know you are on cellular backup if alert email is ignored, may incur substantial data charges running the entire site on a cellular connection

ADVANTAGES

- EMV does not allow *Store and Forward*, you lose internet you lose all credit cards!
- Over 70% of fuel sales are on credit cards now!
- Seamless to customers

RATES

- \$15/Month for service to be active
- \$20/GB monthly

SYSTEM PROCESS

- Sits inline passing information, only cuts over when internet goes out
- Email notifications when failover happens
- Only charged for data used
- Billing in whole GB increments
- Multiple site customers can aggregate data between sites
